

Agilie FinTech & Payment Solutions

What We Do in FinTech & Payments

Your The financial technology landscape is evolving rapidly — businesses need to move money faster, integrate new payment rails, support crypto alongside fiat, and stay compliant with shifting regulations.

Whether it's a consumer-facing wallet, a B2B payment infrastructure, or an embedded finance product, the technical complexity is high and the margin for error is low. text

Where we come in

Payment Infrastructure

We build and integrate payment processing systems, multi-provider routing, and transaction management from scratch or on top of existing platforms.

Crypto & Fiat Products

Wallets, on/off-ramp flows, digital asset management, and white-label financial products bridging crypto and traditional finance.

Compliance-Ready Development

Our solutions are built with PCI-DSS, GDPR, and PSD2 requirements in mind from day one, not as an afterthought.

Why Agilie

What makes us a reliable FinTech development partner

10+

FinTech Clients

Wirex, Wallex, TalkRemit and others trusted us with core financial product development

Full-cycle

Ownership

Discovery, UX/UI, backend, mobile, QA, and post-launch support - all under one roof

PCI-DSS

RegTech Compliance

SOC 2 and GDPR aligned by default compliance is built in, not bolted on

Dedicated

Team Model

Your team scales with your product, stays aligned with goals, and works in your timezone

Crypto-

Native Experience

Blockchain, wallet, and on/off-ramp products built across multiple production projects

Agile

Fast Delivery

Short iteration cycles, daily communication, and transparent delivery without cutting corners

Problems We Solve

- **Challenge**

You need to integrate multiple payment providers but your architecture isn't ready for it

- **Challenge**

Your existing financial product needs to scale but the legacy codebase is slowing you down

- **Challenge**

You want to launch a new financial product but lack the in-house engineering depth

- **How We Solve It**

We design unified API layers that abstract provider complexity and keep your system flexible for future changes

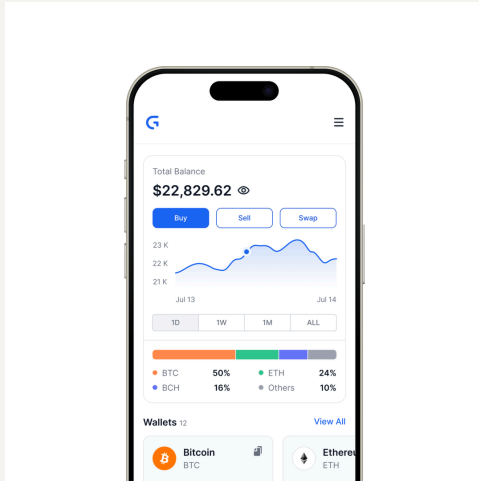

- **How We Solve It**

We modernize and re-architect fintech systems into modular, microservice-based solutions without disrupting operations

- **How We Solve It**

We provide dedicated teams with domain expertise in fintech, covering full-cycle development from discovery to launch

Success stories

GoFinans <https://gofinans.com>

A comprehensive crypto solution

Description: A comprehensive infrastructure for managing corporate crypto and fiat flows, accepting online payments, and developing financial products.

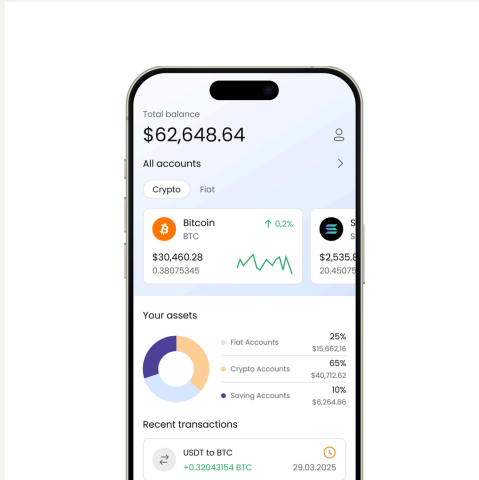

Features:

- Integration via a unified API for business processes
- On-/off-ramp solutions for corporate and individual clients
- Payment acceptance and digital asset management
- White-label solutions for financial services
- Online payment support and fintech product scaling

Impact: Enables businesses to seamlessly bridge crypto and fiat ecosystems, expanding payment capabilities, unlocking new revenue streams, and accelerating the launch of scalable financial products.

Success stories

Wallex <https://agilie.com/wallex>

An easy-to-use digital crypto-wallet

Description: We helped implement key functions for an international payment and finance platform, including transaction processing, integration with payment providers, and improving the user experience.

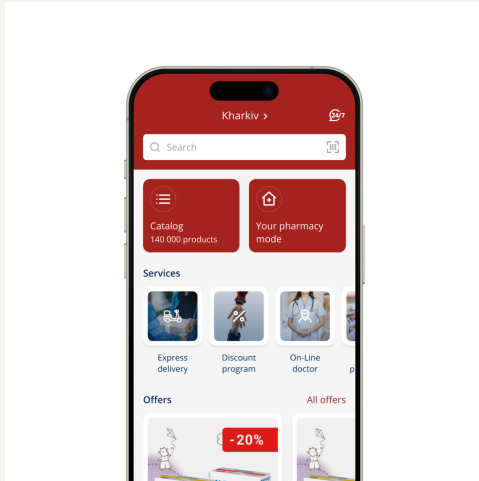

Features:

- Conduct international transactions
- Monitor payment statuses
- Integrate with external systems and APIs
- Improve interface and admin panel for operators

Impact: Empowers users and businesses to manage cross-border and crypto transactions effortlessly, enhancing operational efficiency, broadening access to global financial networks, and enabling rapid deployment of secure, scalable payment solutions.

Success stories

Apteka 9-1-1 <https://apteka911>
Payment Service for Pharmacy

<https://agilie.com/success-stories>

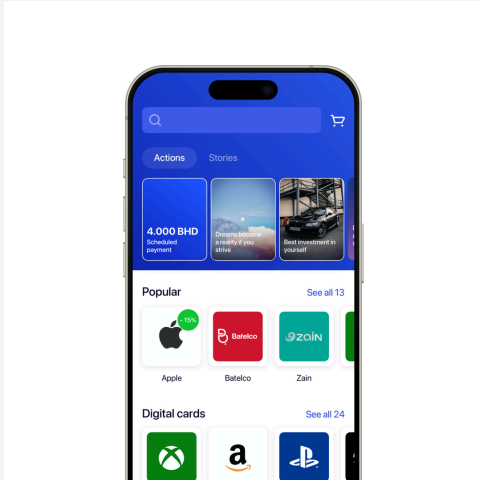

Description: A centralized service for managing online payments. It receives payment requests, routes the customer to the appropriate payment provider, processes the result, and returns the status to the pharmacy system and other business applications.

Features:

- Supports multiple payment providers: LiqPay, Monobank, iPay, Privat Installments
- Generates payment links and pages
- Tracks payment statuses (successful, pending confirmation, canceled)
- Confirms previously blocked amounts, handles refunds
- Integrates with business systems and maintains transaction history for control
- Enables splitting a single payment across multiple providers

Impact: Helps pharmacy streamline payment processing, reduce operational complexity, and enhance the customer experience by providing fast, reliable, and flexible transaction handling.

Success stories

Description: We created a full UX/UI design for mobile apps managing payments and bills, defining visual style and user interaction flows.

App development was not implemented, but the design is fully ready for deployment.
